# terested in Making Homes

VIRGINIANS MAY MAKE

WOOL GROWING BIG THING Now that crops are laid by, Virginia farmers will do well to use some of their spare time in the study of woolgrowing and wool-marketing. To sell at a good price, an offering of wool should be uniformly good, which means that it should be even in structure length and strength of fiber, and that It should be as nearly free as possible from foreign matter, such as dirt, chaft or litter, burrs and tar or in structure and length, the individuals in the flock must be similar in uals in the flock must be similar in breeding. By using pure bredzams of the same breed of a series of years, any flock can be graded up so that the type of woel will be sufficiently uniform in the particulars mentioned to satisfy the demands of the market, provided appears its sufficient to market, provided proper attention is paid to of the ewes reserved for breeding. Th owes should be alike in ficece charac-teristics. In addition to other very necessary requirements, aside from wool, they should carry fleeces even in quality, density and length.

English Down mutton breeds, such as while Shropshire, Oxford and Hampshire. Any of these, under favorable conditions, produces wool which will meet with ready demand. So far as the wool product is concerned, the use of rams

combing wools such as prevail in most sections where farm flocks are kept. In the process of combing, the fiber breaks at the weak place and the wool has to be put to some use of less value. It is therefore pecessary for the owner given a run in the stalks. In all of process of scouring.

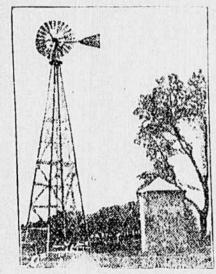

Bor of carbonizing.

Farm flocks as a rule are small, and in case it is desirable to woolbrand there are marking inks or fluids on the market which do no damage to the wool because they come out in the process of scouring. provide feed sufficient to keep his well fed throughout the year.

### CONCRETE WATER TANKS ON THE MODERN FARMS

superior in all respect to any other rust. The concrete mixture should be en in proportions one part cement to one and one-half parts clean, but rather its a and one-half parts clean, but rather is a true miner, feeding upon the fine, sand, to three parts screened mesophyll of the leaf. As far as has gravel or broken stone.

pressure and not leak is best built by

A Round Water Tank

laying the concrete without stopping. Even then there are other essential things, which, if disregarded, will produce a leaky tank. The concrete must be mixed so wet that it will flow over AND THEIR TROUB and around the metal re-enforcements and against the forms. The materials for the concrete must be very care-fully proportioned and the stones small
